MONTSERRAT

Sovereign Navy

Harvest Terracotta

Savannah Gold

Living Teal

Bone

Ink

WHY THE ABOVE COLORS

- Sovereign Navy (#0B2235) is the foundation, and it's deliberate that it's almost black-blue rather than bright. This is the color of the map at night, of depth, of an institution you trust with something valuable. It says we are serious infrastructure, not a startup experiment. It's the color a sovereign wealth fund or a government data office feels comfortable looking at. It holds everything else.
- Harvest Terracotta (#C0552B) is the heart of the whole identity, and it's the boldest choice on the board. This is African earth — the literal ground in "ground truth," the red soil of the continent, and the harvest the name itself points to. Almost every company in your space (geospatial, mapping, GIS) defaults to blue. By making earth your signature color instead of just another shade of tech-blue, you become instantly recognizable and you make a claim no competitor can: that you're not looking down at Africa from a satellite, you're standing in the soil. It's warm and human, which balances the coldness of the navy. When someone thinks "Navuuna," this is the color they should see.
- Savannah Gold (#E0A82E) is value, and it's used sparingly on purpose — gold loses its meaning if it's everywhere. It signals premium, worth, and the wealth angle: the diaspora funding heritage, the high-ticket due diligence reports, the idea that what's being gathered here has real value. It's also a quiet nod to harvest again — ripe, gold, ready.
- Living Teal (#1F8A78) is growth and life, and I'd reserve it almost entirely for the Freedom Index. The Freedom Index is your most human metric — wellbeing, safety, participation, the things that aren't money. Giving it its own living, green-leaning color separates it from the cold industrial data and signals this part measures whether people are actually flourishing, not just whether roads got built.
- Bone (#F4EFE6) and Ink (#1A1A1A) are the breathing room and the text. Bone is warm white — paper, clarity, the feeling of a verified record laid out plainly. It keeps the whole thing from feeling heavy or aggressive.
- The deeper logic: navy + terracotta is the entire thesis in two colors. Cold infrastructure and warm earth. The view from above and the truth on the ground.

WHY THE LINE SIGNIFIES

navuuna®

The line — that teal underline running beneath the uu in nav·uu·na — is the single most loaded element in the whole identity. It looks like a small design flourish, but it's doing the heavy lifting. Here's everything it carries:

- a. **It's the ground.** The line sits underneath the letters, like a horizon, like the soil, like the baseline of a map. The whole brand is about ground truth — and the one graphic gesture in the wordmark is literally a line of ground that everything else rests on. The name doesn't float; it stands on something.
- b. **It marks the two layers.** The line spans the uu specifically, and that's deliberate. The two u's are the two basins of your platform — Atlas (the industrial, ground layer) and Nuvola (the cultural, heritage layer). The line is what joins them and holds them as one system. That's your entire vertical-integration thesis — two layers fused into one platform — compressed into a single stroke. No competitor fuses infrastructure and culture; the line is where you say that, silently.
- c. **Its color is the meaning.** The line is Living Teal — the color reserved for the Freedom Index, for human flourishing. So the thing tying the two layers together isn't a neutral gray; it's life. The visual argument is: what binds Africa's hard infrastructure to its living heritage is the wellbeing of its people. The line says the platform's bottom line is human, not just data.
- d. **It's the harvest line.** If the name means to gather in, the line is the row — the furrow you harvest along, the seam where what was scattered gets pulled into one place. Everything above the line (the letters, the name) is the gathered truth; the line is the act of gathering.
- e. **Practically, it's your ownable mark.** A wordmark needs one detail that makes it un-copyable and instantly recognizable. For Navuuna, that's the underlined uu. You can lift those two basins + the teal line out of the wordmark entirely and use them alone as your app icon, favicon, and pod badge — two cupped contours on a navy field. The line is what lets the logo exist without the full name.

So one stroke is doing four jobs at once: it's the ground, the join between your two layers, the human thread (Freedom Index), and the harvest furrow — and it's also the piece that becomes your standalone logo.

WHAT DOES THE MAP SIGNIFY

This is a strong piece — and it's not just decoration, it's the brand thesis drawn out at full scale. Here's what the map and the way it's drawn would mean:

- **The shape: one continent, no borders.** Africa is rendered whole, with no internal lines dividing country from country. That's your "United Africa / shared digital ledger" claim made visual — Navuuna doesn't see 54 separate markets, it sees one continuous ground. The fact that the continent is the entire canvas also says something: Africa isn't a region on someone else's map here, it's the whole subject, the thing being looked at and into, not from above as a blur but on its own terms.
- **The lines: contours, fingerprints, and currents all at once.** This is the cleverest part. Those flowing strokes read as three things simultaneously. They're topographic contour lines — the literal language of mapping, elevation, terrain, ground truth. They're fingerprints — identity, uniqueness, the one thing that can't be forged, "Africa recorded in its own hand." And they read as currents or data streams — alive, moving, real-time, which is exactly what the Atlas live-feed layer is. So in one texture you've got the map (Atlas), the identity (Nuvola), and the living data — the whole platform, woven together.
- **The weave: fusion, not silos. Notice the three colors aren't kept in separate zones** — terracotta, gold and teal are braided through each other across the whole continent. That's your moat drawn literally: competitors keep infrastructure and culture apart; Navuuna fuses them. The image refuses to separate them, the same way your platform does.
- **The spirals: the harvest, gathering inward.** Those swirling, centripetal patterns — strokes curling toward a center — are the act of gathering in. Scattered, undocumented truth being pulled into one place. That's the name, Navuuna, performed as a motion. It's also the same gesture as the basin/contour mark under your "uu": cupped lines drawing something toward the middle. The whole map and the tiny icon are the same visual language at two scales — which means your logo and your hero artwork belong to one system. That consistency is gold for a brand.
- **The gaps: honesty about what's still undocumented. The strokes don't fill every pixel — there's navy showing between them.** Read generously, that's the unrecorded heritage and infrastructure that hasn't been harvested yet. The map isn't claiming completeness; it's showing a continent in the process of being gathered into view. That quiet honesty actually strengthens the grant story: the work is ongoing, and the picture fills in as you go.
- **The hand-drawn quality: human, not satellite. Nothing here is a clean vector grid or a cold satellite render.** The strokes are organic, slightly irregular, brush-like. That's the entire emotional difference between Navuuna and every other geospatial player — this is the ground as people know it and tell it, not as an algorithm flattens it. Warmth over surveillance. Community over extraction.
- **One small thing to flag: the little circular icon sitting over East Africa is the upload button from your screenshot, not part of the artwork itself** — so don't read meaning into it as-is. But it's a happy accident worth keeping on purpose: a single marker right around Kenya/Nairobi would read as "this is where the harvest begins" — your origin point, your Phase 1 pilot ground. If you placed a deliberate Navuuna mark there, the map would also tell your rollout story (start in Kenya, spread across the continent).

Put simply: the map says Navuuna sees Africa as one living, unique, self-recorded ground — and is gathering its scattered truth, strand by strand, into a single view. It's your one-paragraph brand story rendered without a single word.
